Statistical and Commercial Department,
Board of Trade, Whitehall,
18*th December* 1882.

TO THE SECRETARY OF THE BOARD OF TRADE.

SIR,

I HAVE the honour to submit the ninth number of the Statistical Abstract for Foreign Countries, which has been compiled, as usual, from the published statistical records of the various foreign countries, supplemented by information specially furnished by the heads of statistical bureaux abroad, to whom I desire again to offer the thanks of this Department for their continued courtesy in revising the tables relating to their particular countries.

In the present number tables have been added showing the imports and exports of principal articles from and to the Kingdom of Portugal, thus making the returns of imports and exports of principal articles in European countries practically complete, an object which has been in view since the first compiling of this Abstract.

Tables have also been added showing the amount of customs duties levied on imports in each country. These tables are necessarily at first incomplete, but it is hoped in future years, by supplementing the information already given, to render this account of import duties a valuable addition to the Foreign Abstract. The duties levied in the United States stand out very conspicuously, amounting to more than 40 millions sterling, compared with 9,600,000*l.* collected in Germany, 13 millions in France, and 19 millions in United Kingdom.

I seize this opportunity to draw attention to two points which illustrate the difficulty of compiling comparative statistics for foreign countries, and to which it is necessary to have some regard in using the shipping statistics in the present volume. First:—

in the shipping statistics of foreign countries it has been found that the so-called "Moorsom" system of admeasurement has, between the years 1865 and 1875, been universally adopted. A universally recognized system of admeasurement for vessels, therefore, exists, but for steam vessels another circumstance has to be considered, namely, the various systems of allowance for engine and coal room which obtain in different countries. The principal of these systems are the English and the German; the former is in use in England, France, and Sweden, the latter obtains practically throughout the Continent. The allowances for engine-room given under the English system are considerably in excess of those given under the German; the actual excess amounting to 12 per cent. It follows that, in the usual official figures, when they are used for comparative purposes, either the English (and the French) Steam Mercantile Marine is under-valued in its carrying capacity by 12 per cent., or the German, the Austrian, the Italian, and the Norwegian Steam Mercantile Marines are over-estimated. In 1881 the steam tonnage of the United Kingdom under the English system of admeasurement amounted to 3,003,988 tons; had the German system of admeasurement been applied, the total tonnage of 3,364,466 tons would have been reached. On the other hand, the total steam tonnage of the German Empire at the end of the year 1881 represented 251,648 tons (German admeasurement); under the English system, this would represent a tonnage amounting to 224,687 tons only.

I have not thought it well to make these and similar calculations for the various foreign countries mentioned in the Statistical Abstract, but it seems desirable to draw attention to them here, for although well known and commented upon by statisticians, they may not be sufficiently considered by some who have not had the advantage of attending the International Statistical Congresses, which have done so much to throw light on the comparative statistics of the various countries.

The second, and minor, point has reference to the entries and clearances of shipping in Spain. No account is taken there of

the number and tonnage of vessels entered with cargoes in transit, but they are included in the clearances, thus making the number and tonnage of vessels cleared from Spanish ports largely in excess of those entered.

I have the honour to be,
Sir,
Your obedient Servant,
R. GIFFEN.

Commercial Department,
Board of Trade, Whitehall,
18*th December* 1882.

* The returns received by the Statistical Bureau of passengers departing from the United States do not distinguish permanent emigrants from transient travellers. The figures entered in this column have been derived from the body of the table by deducting the number of "non-immigrants" from the whole number of departures for each year, the process being based on the consideration that of the former number those who are reported as "Citizens of the United States" have previously departed and been embraced in the reports of departures, while those reported as "Aliens not intending to remain" will depart in future and be so reported. These figures will therefore be substantially correct for any series of years, but may not be strictly so for any one particular year.

Note.—The amount placed opposite the fiscal year is the production of the preceding calendar year. For example,—the quantity stated in the column of "Production," opposite the year 1878, is the production of the calendar year 1877, since the exports of Wheat during the year 1878 were principally of the crop of the calendar year 1877.

The production of Wheat during the years 1859 and 1869 is taken from the Census reports of the succeeding years. The production for the other years is taken from the Annual Reports of the Statistician of the Department of Agriculture.

* The Winchester Bushel is smaller than the Imperial Bushel by one thirty-second part.

Commercial Department,
Board of Trade, Whitehall.
22*nd December* 1883.

TO THE SECRETARY OF THE BOARD OF TRADE.

SIR,

I HAVE the honour to submit the tenth number of the Statistical Abstract for Foreign Countries, which has been compiled as usual from the published statistical records of the various foreign countries, supplemented by information specially furnished by the heads of statistical bureaux abroad, to whom I desire again to offer the thanks of this Department for their continued courtesy in revising the tables relating to their particular countries.

Tables have been added in the present number showing the trade of Roumania and of Mexico. With regard to Roumania, a statistical bureau has lately been established in that country under the Presidency of M. Stèriadi, and the returns furnished are of a distinctly useful kind. I am able by their help to give tables of the Imports and Exports of Roumania, distinguishing the principal countries of Import and Export. With regard to Mexico, the returns are not as yet so complete as might be wished, and the total trade of the country cannot be fully shown for a series of years. I have, however, been enabled to give a table showing the Exports of Mexico, distinguishing the principal countries to which the goods were exported, and this table, though incomplete, still serves to give a fairly satisfactory view of the export trade of the country during the last decade.

The telegraph statistics of various European countries, which were commenced in the fourth number of this abstract, have now reached a certain point of completeness, and I have thought it

well to add a table showing the number of telegrams despatched in each of the most important countries of Europe, and also the proportion which they bear per head of population. This table extends back to the year 1870.

The first number of the Statistical Abstract for Foreign Countries was issued by this Department in 1874, and it is now practically the only record published by the Board of Trade which deals with the statistics of foreign countries; each succeeding number has been increased by the addition of fresh statistical data, and the publication has now reached to such a size (nearly 250 pages) that I have considered it desirable to append an index at the end of the abstract in addition to the table of contents, which is given at the beginning. This index is alphabetically arranged, and will, I think, prove of considerable assistance to the public when consulting a volume of this bulk.

I have the honour to be,
Sir,
Your obedient Servant,
R. GIFFEN.

Commercial Department,
Board of Trade, Whitehall.
22nd December 1883.

* The returns received by the Statistical Bureau of passengers departing from the United States do not distinguish permanent emigrants from transient travellers. The figures entered in this column have been derived from the body of the table by deducting the number of "non-immigrants" from the whole number of departures for each year, the process being based on the consideration that of the former number those who are reported as "Citizens of the United States" have previously departed and been embraced in the reports of departures, while those reported as "Aliens not intending to remain" will depart in future and be so reported. These figures will therefore be substantially correct for any series of years, but may not be strictly so for any one particular year.

Note.—The amount placed opposite the fiscal year is the production of the preceding calendar year. For example,—the quantity stated in the column of "Production," opposite the year 1878, is the production of the calendar year 1877, since the exports of Wheat during the year 1878 were principally of the crop of the calendar year 1877.

The production of Wheat during the years 1859 and 1869 is taken from the Census reports of the succeeding years. The production for the other years is taken from the Annual Reports of the Statistician of the Department of Agriculture.

* The Winchester Bushel is smaller than the Imperial Bushel by one thirty-second part.

INDEX TO FOREIGN ABSTRACT.
